On Jan 16, 1999 this sequence version replaced gi:3927943.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.
This sequence is the entire insert of clone 596H12. This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       710. .840 https://dolem.com/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/predictions/pr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence was generated from part of bacterial clone contigs of human chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr6 5964H2 is from the library RPC14 constructed at the Roswell Park Cancer Institute by the group of Pieter de Jong. The direct repeat elements (1) may be implicated in the cell division cycle regulated expression of CDC9. 46 amino acids (pos. 2367-2504) show homology to regions of the T4 and T7 bacteriophage DNA ligases, and include the putative AFP binding site. CDC36 is included within the category of so-called 'start genes', encoding proteins which are required in early G1, when the cell is faced with the option of initiating a further cell cycle.

Claim 2, Page 33; 41pp; English.

Interleukin 1-alpha (IL-1-alpha) primers 4 and 3 (V32395) were used to maplify the IL-1-alpha gene region to identify single base variation polymorphism of CT at base 889. The invention claims to provide a nethod for predicting the risk of sight threatening diabetic retinopathy.

The method involves isolating DNA from a patient and determining the DNA polymorphism pattern of the genes that code for interleukin-1-alpha, interleukin-1-bet and interleukin-1-RN. The polymorphic pattern interleukin-1-bet and interleukin-1-RN. The polymorphism pattern thereby identifying patients carrying a genetic polymorphism pattern thereby identifying patients carrying a genetic polymorphism pattern thereby identifying patients carrying a genetic polymorphism pattern associated with increased risk of sight threatening diabetic retinopathy. The method may be able to identify diabetic patients at risk before the clinically detectable disorders occur. Polymorphism pattern clinically detectable disorders occur. Polymorphism pattern of IL genes involved PCR reactions using primers v32389-v32398. The method is also claimed to be useful in conjunction with incremination of IL genes involved PCR reactions using primers v32389-v32398. The method is also claimed to be useful in conjunction with certinication of other genes associated with sight threatening diabetic patients expressing multiple risk patterns.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  COXA) COX A.

New isolated nucleic acid encoding the new human cytokine Tango-77 - used to inhibit inflammation and to screen for specific modulators

Example 5: Figure 3: 226pp; English.

X02956-X03048 and X22301-X22304 are overlapping BAC genomic sequences

CC X02956-X03048 and X22301-X22304 are overlapping BAC genomic sequences

CC Tango and the method of the invention which describes the isolation of a novel human TANGO-77 encoding nucleic acid and protein. Tango-77 is a novel human TANGO-77 encoding nucleic acid and protein. Tango-77 is a inflammation by binding to the interleukin-1 receptor (IL-1R). It may also bind to a new receptor so could requilate other cellular processes associated with acute or chronic inflammation, e.g. asthma, chronic conflammation are acid inflammatory bowel disease. It may also induce or suppress interleukins, cytokines and growth factors. Modulators of this protein are used to treat or prevent conditions associated with abnormal levels of inflammation, or activity
                                                                                                                                                                                                                                                                                                                        ö

disease-associated haplotype enables determination of which alleles are causative, and this information is useful in designing treatment strategies, including gene therapy and treatment using various agents that modulate the activity of proteins produced by the IL-1 gene cluster some alleles from the IL-1 gene cluster are associated with particular inflammatory diseases, and insufficient IL-1 production appears to act gene clusters is useful in determining genetic susceptibility to inflammatory diseases, including those with a multifactorial etiology with a polygenic component.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  22-JUN-1999 (first entry)

Human IL-Ira BAC contiguous DNA sequence 33.

Hango-7: human; IL-Ira, cytokine superfamily; inflammation; inhibition; interleukin-1 receptor; IL-IR; regulation; asthma; rheumatoid arthritis; chronic myelogenous leukaemia; psoriasis; inflammatory bowel disease; growth factors; treatment; IL-1 receptor complex; BAC; ss.

Purified hepatitis E strain SAR-55 virus - used to develop prods. for use in detection, diagnosis, vaccines and therapy of hepatitis E virus infection Claim 2; Page 16-20; 114pp; English. This sequence represents the genomic sequence of the hepatitis E virus (HEV) strain SAR-55. This sequence contains three open reading
                                            New peptide(s) useful in treatment of myasthenia gravis - also in diagnosis, having acetyl:choline receptor-alpha like activities. Disclosure; Fig 1; 13pp; Japanese.
Peptides derived from the hACR-alpha gene product have similar immunogenicity to the gene product, and may be useful in the treatment and diagnosis of myasthenia gravis caused by neuropathy in autoimmune reaction to ACR.
The sequence given contains breaks in some of the introns, at these locations 60 N residues have been inserted to preserve integrity.

Claim 2: Pages 16-21; 121pp; English.

The present sequence is the CDNA of the hepatitis E virus (HEV)

Strain SAR-55, which was implicated in an enterically transmitted non-A, non-B hepatitis in Pakistan. The protein encoded by the con-A, non-B hepatitis in Pakistan. The protein of HEV structural region of the virus (i.e. ORF-2), which is capable of structural region of the virus (i.e. ORF-2), which is capable of forming HEV like particles, is useful for the detection of HEV cerebrospinal fluid, tissue, urine or pleural fluid. The protein, can antibodies generated using the protein, can also be used in vaccines for immunising an animal against HEV infection.

The protein is identified as a band of greater than 50 kD
frames (ORFs). The proteins encoded by this sequence can be used to stimulate the production of protective antibodies upon injection into a mammal that would serve to protect the mammal upon challenge with wild type HEV. The proteins can be used for detection and diagnosis of HEV infection. This cDNA was isolated from primates innoculated with stool suspensions obtained [2294 C, 1867 G, 1784 T;
                                                                                                                                                                                                                           Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Particular expressed sequence tags from human CDNA - corresponds

To transcription prods. of genes, useful for tagging genes,
mapping chromosomes and tissue typing

To transcription prods. of genes, useful for tagging genes,
mapping chromosomes and tissue typing

State of 199pp; English.

This sequence represents an EST (expressed sequence tag) ESTs are markers

for human genes actually transcribed in vivo. Unlike the random genomic

DNA sequence ragged sites (STSs), ESTs point directly to expressed genes.

The use of ESTs could facilitate the tagging of most expressed human

genes within a few years at a fraction of the cost of complete genomic

Sequencing. Using PCR primers 039419-039580 (sequences designed

from the ESTs) sublocalisation of an EST can be achieved with panels of
fragments from specific chromosomes or pools of large genomic clones in

an analogous manner. This sequence represents EST00020.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Example 1; Page 114; 500pp; English.

Example 1; Page 114; 500pp; English.

The Expressed Sequence Tag was isolated from a human brain cDNA
library as part of a large set of ESTs which can be used as markers
for human genes transcribed in two. They can be used to facilitate
tagging of most human genes, for mapping locations of expressed genes
on chramosomes, for individual or forensic identification, for mapping
locations of disease-associated genes, for identification of tissue
type, and for prepn. of antisense sequences, probes and constructs.
EST00020 has an "excellent" coding probability as evaluated using the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human brain Expressed Sequence Tag EST00020.

The present invention describes a computer readable medium which has the present invention describes a computer readable medium which has the nucleotide sequences SEQ ID NO:1 to 391 (V52134 to V52524) recorded on it, or a representative fragment or a sequence at least 95% identical CC to SEQ ID NO: 1 to 391. The nucleotide sequences depicted in SEQ ID NO:1 to 391 (V52134 to V52524) are genomic fragments from Streptococcus pneumoniae. The present invention also describes an isolated nucleic acid molecule encoding a homologue of any of the fragments of the S. pneumoniae GC molecule encoding a homologue of any of the fragments of the S. pneumoniae genome (SEQ ID NO:1 to 391) where the nucleic acid molecule is produced by a process comprising: (a) screening a genomic DNA library using as a cc probe a target sequence defined by any of the sequences in SEQ ID NO:1 that hybridise to the target sequence and isolating the nucleic acid molecules from the members; or (b) isolating mencles from the members; or (c) isolating mencles from the members; or (b) isolating mencles from the computer readable medium can be sequence is homologous to amplification primers derived from the computer-based system for identifying fragments of the S. pneumoniae genome to prime the amplification and cused in a computer-based system for identifying fragments of the S. pneumoniae genome. Products from the present fragments of the S. pneumoniae genome. Products from the present for invention can be used in diagnosis kits and assays, and pharmaceutical commonsitions and vancines for a monomonial for a manimum tand.
                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       07-MAY-1998.

To identify a cDNA from potato which codes for citrate synthase, a cDNA fragment of citrate synthase from Arabidopsis thaliana was firstly amplified using A.thaliana cDNA and oligos T04202 and T04203 which are complementary to the 5' or 3' end of the coding region of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Targeting adenovirus to cell-surface protein - using bifunctional ligand that interacts with adenovirus fibre and cell-surface protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
22-oCT<sub>0</sub>1998 (first entry)
PCR primer used to mutate part of graph adenovirus serotype 5.
Domain alpha 2; antigen; major hi-tocompatibility complex class I;
MHC-I; primary receptor; serctype G adronovirus; human; fibronectin;
module III; targeting; cell-surface rotein; cellular receptor;
bifunctional ligand; tumour cell; intected cell; PCR primer; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    La Cognata U, Landschutze V, Muller-rober B, Landschuetze V;

A. thaliana cDNA for citrate synthase. The oligos additionally introduce BamHI cleavage sites at both ends of the amplified cDNA fragment. a cDNA library was prepd. from potato leaves and screened with A. thaliana citrate synthase cDNA. Positive clones were purified and sequenced. Then t sequence is given in T04199. Sequence 1891 BP; 512 A; 370 C; 425 G; 584 T;

One of the clones was sequenced. The nt. sequence is given in T04201.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         to improve storage of tubers, etc. and to reduce sprouting Claim 7: Page 60-63: 87pp; English.
To identify a cDNA from tobacco which codes for citrate synthase, a cDNA bank of leaf tissue from tobacco was prepd. Plaques of this cDNA bank were screened using a radioactive DN probe which comprises Solanum tuberosum citrate synthase cDNA.
                                                                                                                                                                                   Length 1891;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              germ cell tumors, and was then primed with a Not I oligo(dT) primer. Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT7T3 vector. Library is normalized. Library was constructed by Bento Soares and M. Fatima Bonaldo.

* NOTE: This is a "working draft' sequence. It currently
* consists of 5 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence * as soon as it is available and the accession number will * be preserved.

* NOTE: This is a 'working draft' sequence. It currently consists of 5 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. * This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Direct Submission

Submitted (06-JUL-1998) E-mail enquires: humquery@sanger.ac.uk

Clone requests: clonerequest@sanger.ac.uk

On Jul 1, 1998 this sequence version replaced gi:2980811.

During sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations

together with a note of the overlapping clone name. Note that the

variation annotation may not be found in the sequence submission

only a small overlap as described above. This sequence submission

only a small overlap as described above. This sequence is the

entire insert of clone 501N12. This sequence has been finished

according to sequence map criteria as follows. An attempt is made

to resolve all sequencing problems, such as compressions and

repeats, but not necessarily within known annotated human repeat

sequence elements (e.g. Alu). Where the sequence is ambiguous,

there is an annotation using the 'unsure' feature key.

This sequence was generated from part of bacterial clone contigs of

human chromosome 6 mapping group and Armin Volz & Andreas Ziegler.
